

Securage

Most Simple Data Loss Prevention and Anti-Ransomware Storage

Securage is the most simple and effective Data Loss Prevention and Anti-ransomware technology today. Securage is Scale-OUT NAS storage system that embed DLP and anti-malware features. Because Securage is NAS storage solution, mixed OS and Application types and versions are no concerns. OS's and Applications may be freely upgraded or changes as necessary. Simple data management policy increases productivity of the organization and security of data together.

Because Securage is provided as NAS services, users need not install or learn new solutions. System administrators are free from client PC managements. No need to hassle with ECM or end point solutions.

Securage is the only solution to protect your data from Leaking or Stealing.

Data Loss Prevention

- Provide MS-Windows and Linux POSIX Compatible Driver
- Allow only proper users and applications to access files
- Manage file selection categories to choose files to be encrypted
- Manage applications to access files
- Provide ways to REQUEST files to be released

Anti-Ransomware

- Provide MS-Windows and Linux POSIX Compatible Driver
- Prevent Ransomware attacks in Storage Level
- Decide access files based on Process ID, file access methods, other service monitoring and more
- Manage black and white list of applications dynamically
- Manage black and white list of file types dynamically

Recover destroyed files by Ransomware

- Keep history of all file changes in Storage level
- Selective files can be recovered to the specific version
- All files can rolled back to before-specific time
- Provide file history management policies

Increase Productivity and Security together

- Simple to manage and use increased productivity and security at the same time

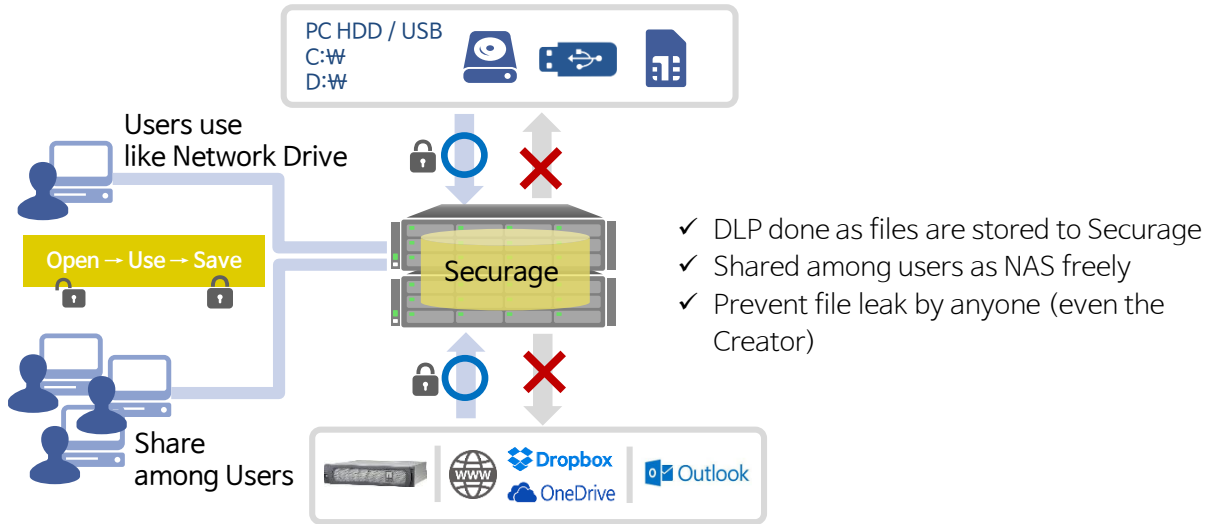

- Storage level DLP and Anti-ransomware provides no OS or Application dependencies completely
- Free from mixed OS environment and upgrades

Scale-Out Storage

- Securage is based on InfiniStor™ Scale-Out NAS storage system
- The system scales to 512 storage servers in Peta Scale
- Starts small and expand as necessary
- No single point of failures
- InfiniDR allows continuous service and protection in case of site level failure
- S3 compatible Object Storage Service platform
